Crack the Vote: Blank

|  | $\square$ |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\square$ |  | $\Lambda$ |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  | $\Lambda$ |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  | $\square$ |  |

The circles and triangles represent voters. Use background colors to represent the districts. You can change the district of a voter by changing the background color of the square in which it "lives."

1. What percentage of voters are circles? What percentage are triangles?
2. Divide voters into 5 contiguous districts with an equal number of voters in each so that the circles and triangles are fairly represented.
3. Divide voters into 5 contiguous districts with an equal number of voters in each so that the triangles have no representation.
4. Divide voters into 5 contiguous districts with an equal number of voters in each so that the triangles win $60 \%$ of the districts.
5. What other configurations can you discover?
